

Swiss precision for excellent audio quality

# VOICE TECHNOLOGIES

## VT610TC32/VT610TC125 Earphone

Great sound quality for program that matters.

The Voice Technologies VT610 is designed for inconspicuous listening requirements of newscasters, security professionals, stage performers and other talent requiring discreet cueing.

The earphone has a standard, typical size 32 or 125Ω driver. In combination with a coiled acoustic tube the sound is directed into the ear canal. This method reduces the ingress of ambient noise.

All parts can easily be exchanged. Other plugs or another cable length are available on request.

The VT610 comes in a stable plastic box. As an alternative to the standard earpiece a Flexible Ear Insert for left or right ear (Sizes: small/medium/large) is also available.

**Application area:** Broadcast - Security
