WIRING POSSIBILITIES VT403 SERIES

Swiss precision for excellent audio quality

VOICE TECHNOLOGIES

VT403 Series lavalier microphones are 2-wire or 3-wire capable in one mic. Out of the box it's a 2-wire, Ground (Green) and +VDC (Red). The „bump“ in the bottom of the cable houses a resistor that's needed for proper 2-wire operation, e.g. 3-Pin LEMO connectors for Sennheiser SK-, Lectrosonics SSM, Wisycom etc.

For 3-Wire operation (Lectrosonics TA5F or Shure TA4F) you just cut off the bump, remove the appropriate length of the outer jacket and now it's a 3-wire mic, Ground (Green), +VDC (Red) and NF (Copper). Wiring configuration for different connectors can be found at www.vt-switzerland.com at the respective product.

Cut here for 3-wire applications
